DETAILED ACTION

Claim Status

Claims 19, 22-23, 28, 20, 24-27, 29 and 30 are pending. Claim 21 has been canceled.

Response to Amendment

1. The amendment filed 2/18/04 is objected to under 35 U.S.C. 132 because it **introduces new matter into the disclosure**. 35 U.S.C. 132 states that no amendment shall introduce new matter into the disclosure of the invention. The added material which is not supported by the original disclosure is as follows: an "energy/power" path.

Applicant is required to cancel the new matter in the reply to this Office Action.

Claim Rejections - 35 USC § 112

2. Claims 19, 22-23, 28, 20, 24-27, 29 and 30 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and **distinctly claim the subject matter which applicant regards as the invention**.

3. In independent claims 19, 20, the "phrase energy/power" is vague and indefinite because it's not clear what this means in a claim or claim boundary.

4. In independent apparatus claims 19, 20 and 30, the use of inactive or negative recitation language in critical elements to the claimed invention such as "power ... is measured using energy measuring equipment mounted on the energy path and settled through CO₂ emission right" is vague and confused. Another element cited in the claim "an interchange administration equipment which carries out settlement" is noted but it's not clear the relationship between this equipment to the previous step of "is ... settled".

Note that in an apparatus claim, only structural limitations written in active or positive state carry patentable weight. Manner or method in which an apparatus is to be operated is not germane to the issue of patentability of the apparatus itself.

5. In independent apparatus claims 19, 20 and 30, the phrase “interconnection adjustment equipment which transmits converted values to respective governmental areas based upon information from said measurement equipment” is vague and confused because it’s not clear what information it refers to and values it talks about.

6. In independent apparatus claims 19, 20 and 30, it’s not clear the relationship between “an interchanger for transmitting said generated power” and “an interchange administration equipment which carries out settlement”? Are these the same or different elements of interchanger. Also, the phrase “an interchanger for transmitting said generated power to another governmental area” is vague and confused because it’s not clear whether this refers to the changing of the generated power from a) one type to another type of power or b) from one governmental area to another governmental area beyond a governmental area? Also it’s not clear the relationship between “one governmental area” (line 3) to “a governmental area” (line 6).

7. In independent apparatus claim 20, the phrase “wherein date and time information ... by synchronizing” or between lines 6-11 are vague and confused.

Note that in an apparatus claim, only structural limitations written in active or positive state carry patentable weight. Manner or method in which an apparatus is to be operated is not germane to the issue of patentability of the apparatus itself.

Art Unit: 3629

8. It 's recommended that the claims be rewritten to encompass all of the necessary equipments to carry out the scope of the invention which are under "system further comprising" (or the amended language) into the initial body of the claim. All of the passive language "is .. measured or settled or transmitted or supplied or achieved" should be deleted and replaced with active elements with means for doing something.

Conclusion

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The Article "Long-distance interties connect faraway areas" (March 1991) fairly discloses an energy interchanging system similar to the claimed invention comprising:

- a) a source of generated power,
 - b) power path (grid and transmission lines)
 - c) interchanger,
 - d) power measuring equipment (metering),
 - e) power control equipment (regulate power flows),
 - f) interconnection and administration equipment (data supply to energy-management systems among multiple parties and global communications grid).
- (see page 23, left hand column, lower paragraphs).

10. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
